

GEDEX

PRE-SEED

November, 2023

The Future is Cross-Chain

→ +212 blockchains and growing

Blockchains are EVM compatible

Total Value Locked is on EVM blockchains

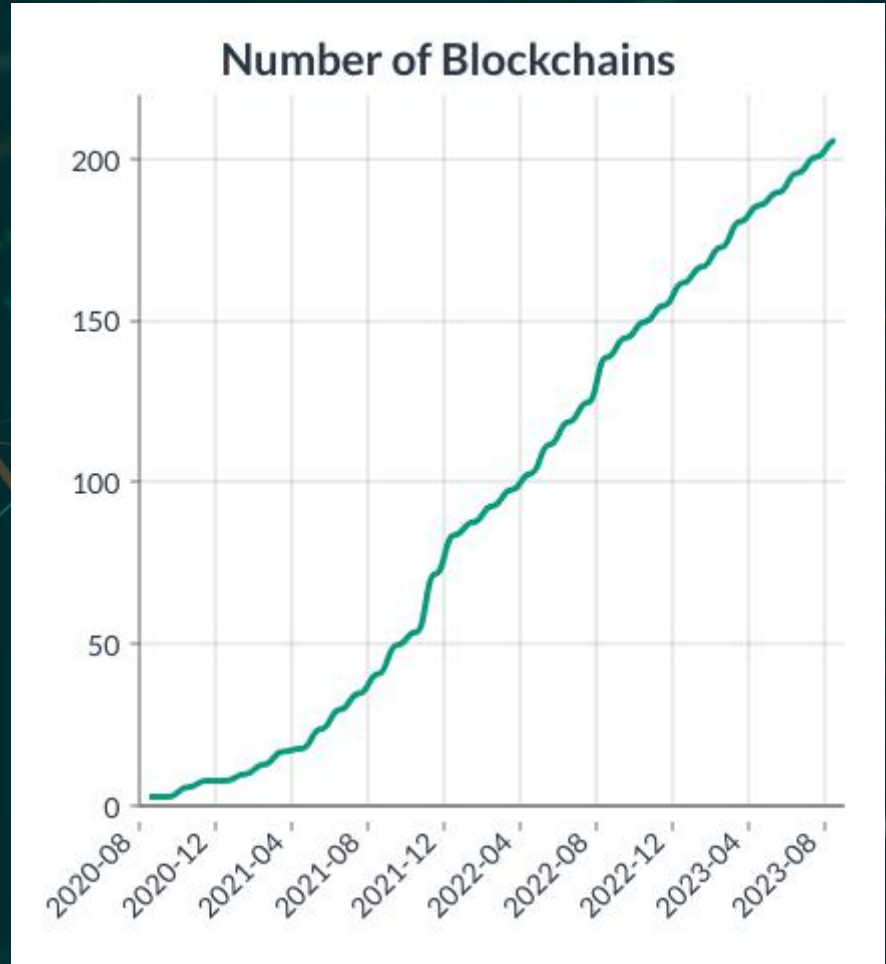

\$17.5 Trillion TAM

→ Total **yearly** trading volume on **exchanges**

\$1.1 Trillion SAM

→ **\$950 billion yearly** trading volume on **DEXs**

→ **\$132 billion yearly** transfers volume across **bridges**

*Data from DefiLlama and Coingecko. Volumes are averaged over the last 12 months.

Decentralization at Stake

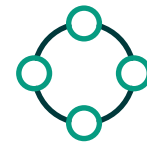

Demand for interoperability is growing, but current solutions require trade-offs:

- Cross-chain trading involves **multiple transactions** across various DEXs and bridges
- This complex process carries **significant costs**, sometimes exceeding **1%¹** of the traded amount
- Users face the **dilemma** of choosing between **decentralization**, ease of use, and **cost-efficiency**
- DeFi protocols are turning to aggregators that **compromise** their **decentralization** and security

¹ Squid app (<https://app.squidrouter.com/>). Swap from JOE (Avalanche) to SUSHI (Arbitrum).

The Solution

GEDEX's liquidity router provides interoperability to DEXs while preserving their decentralization

Decentralized

Native Web3 solution without centralized stablecoins as a bridge asset.

Secure

The **Omnibridge** system ensures security of funds and continuity of service even if a bridge is compromised

Efficient

One-step swaps and an advanced AMM with concentrated liquidity and impermanent loss control minimize costs for users while maximizing profitability for liquidity providers

Better than Competitors

AGGREGATORS, LIKE SQUID, STREAMLINE THE TRADING PROCESS BUT DON'T ADDRESS THE UNDERLYING COST ISSUES AND ARE CENTRALIZED

High Costs

Fees from up to **six** different protocols with high **gas** cost

Risks

Relies on a single bridge, which may pose **risks**

Centralization

Depends on **Web2** and requires **centralized stablecoins**

Cost Efficiency

Minimal fees and gas thanks to **optimal** protocol design

Security

Omnibridge solution ensures **security** and **reliability**

Decentralization

Web3 native, uses its own **token**, permissionless

AT THE PERFECT MOMENT

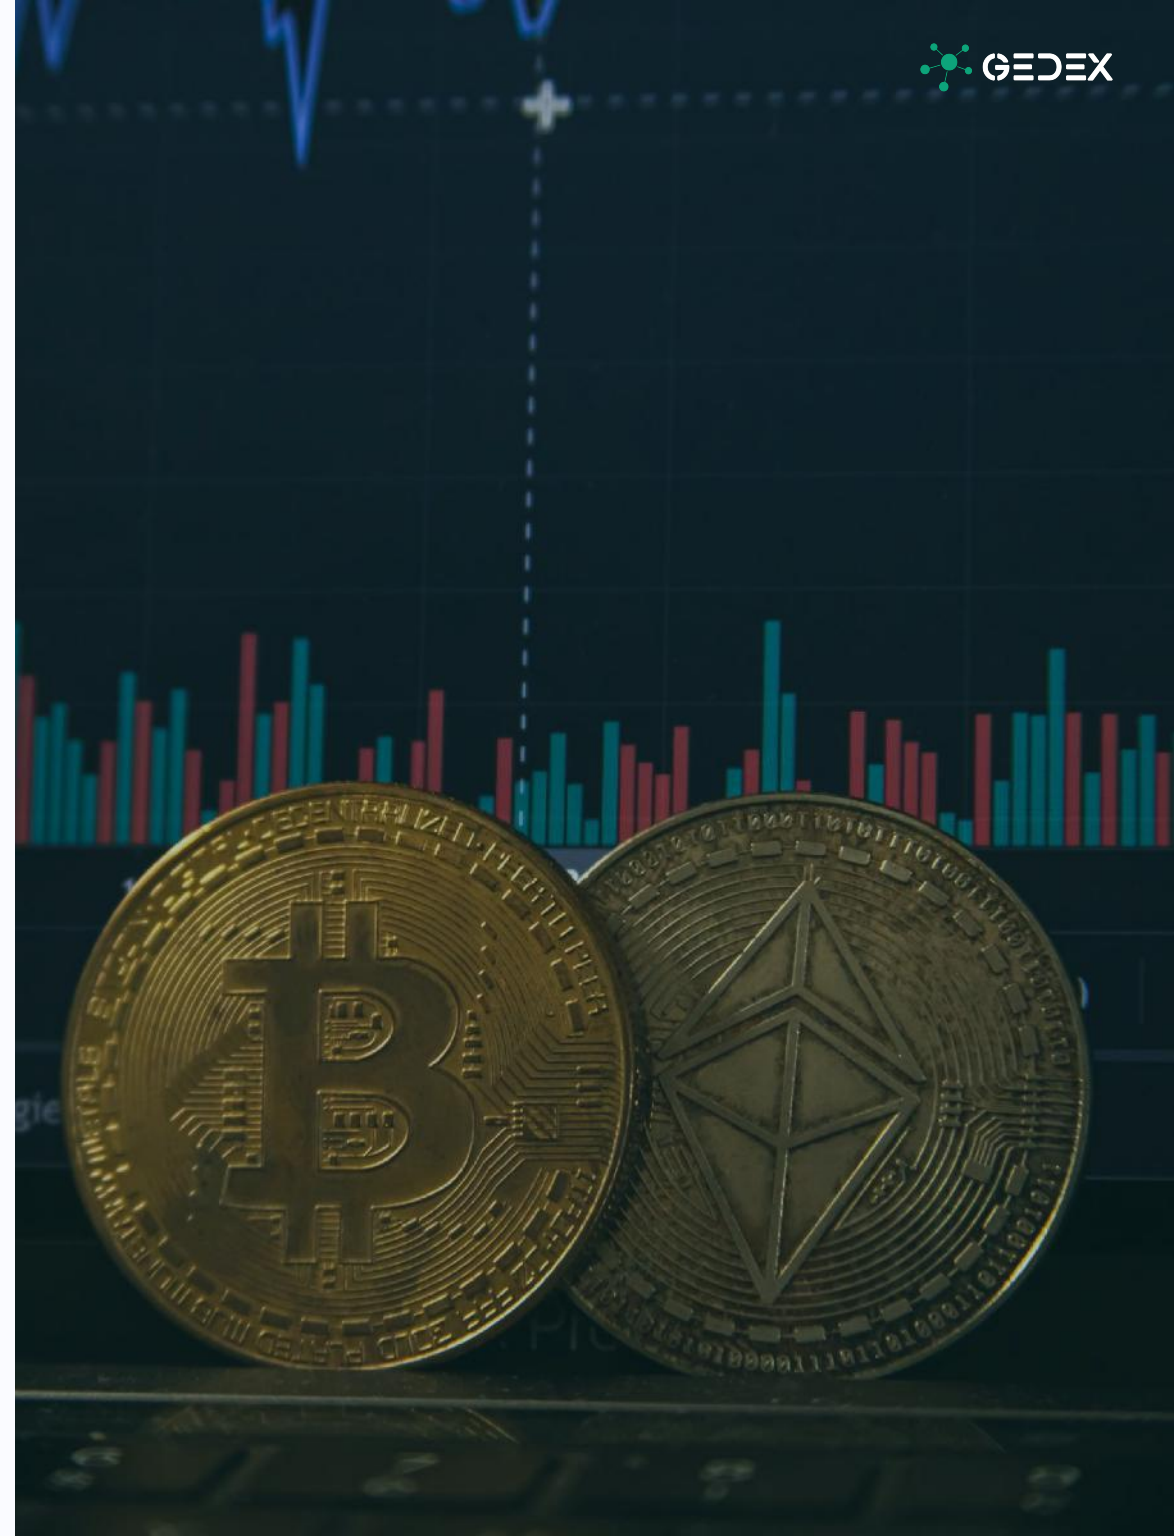

Our **MVP** is already live on testnet

The cross-chain **narrative** is gaining traction, making this the perfect moment to introduce GEDEX

The success of recent **infrastructure** projects that allow **cross-chain** data exchange (Axelar, LayerZero, Chainlink CCIP) makes this the ideal time to create this solution

DON'T MISS THE OPPORTUNITY

- The Cross-chain **narrative** is surging and the time is now
- The **opportunity** within this market is huge
- GEDEX offers a **unique**, novel approach to solving several critical challenges
- We outperform competitors with simplicity, cost-efficiency, and **profitability**
- With a **ready** MVP and the capability to outpace competitors, the opportunity is knocking. Don't miss it.

THANK YOU

P.S. HAVE YOU MISSED THE **FOUNDER'S** STORY? THAT'S THE BEST PART!
